

# ENERGY AND ENVIRONMENTAL SUSTAINABILITY

As a company specializing in public-private partnerships for the design, financing, development, and delivery of support services for secure facilities, processing centers, and community reentry centers worldwide, we work to promote our growth and operations in a sustainable and responsible manner. **We are committed to delivering our services, the development and operation of new and existing buildings, in a manner that contributes to positive economic, social and environmental outcomes for the individuals in our care, our employees, government agency partners, and shareholders, as well as the communities we serve.**

Mindful of energy, water and waste management, we have adopted an integrated approach focusing on environmental protection and awareness, waste and energy reduction, and risks and opportunities related to climate change. We are committed to maintaining the environment and reducing the footprint of our business operations by:

- Identifying, measuring, and offsetting the environmental footprint of our global operations;
- Reducing our environmental impact through local operations initiatives;
- Preventing pollution by conserving energy and resources, recycling, minimizing waste and pursuing other resource reduction strategies;
- Maintaining full compliance with applicable environmental laws, regulations, and company policies and procedures; and
- Working with our stakeholders on activities that promote environmental protection and stewardship.

Using our environmental management system, which monitors our energy and water usage, as well as waste and carbon emissions, we are pursuing a sustainable and environmentally sound future. We are committed to creating sustainable environments in the operation of our facilities worldwide, and we believe that our adoption of a greener operational philosophy lowers operating costs and emissions to the benefit of all. We regularly strive to identify sustainable initiatives and innovations that deliver energy and natural resource efficiency across new and existing facilities we own and manage.
